  Backend development Facilitor
  I am working as a Facilitator at the hub, who trains students on how to build API using express framework, handling and managing Mysql Database using sequelize and handling logic using Javascript functions.

Projects

- **Coding bootcamp for Kids**
  Designed and delivered a game development training program for kids using Scratch.

  Results
  Successfully trained 7 kids, aged 6-12, in problem solving skills, game development fundamentals and team work. Participants created their own simple interactive games, worked on teams and demonstrated improved problem-solving skills and creativity.

  Skills Utilized Scratch programming, game development and community engagement.

- **E-commerce Platform Development**
Built a custom e-commerce platform for a fashion company, integrating features such as product management, payment gateway, and order tracking.

  Results:Successfully launched the platform, resulting in increase in online sales and reduction in order processing time.

  Skills Utilized: Nodejs, EJS SSR, Database management(mysql), Github for version control and Communication for client relations.
- **Contest Management API Development**
Developed a RESTful API for contest management, enabling the creation and tracking of contest, contestants and voting of contestants.

  Results: A functional API that was consumed by the frontend developer

  Skills Utilized : nodejs, Express, Database management (mysql), ORM for easy Database migration, git for version control
